

OBDSsync™ and MFB™
One standard software-set compatible with all EFB hardware systems

OBDS DELIVERS !
ONE-BUTTON UPDATES BY **OBDSsync™**

NEW for FALL 2009

Enhanced features for EFB/MFB Fleet managers

Crew Notifications and Update Monitoring

A simple 3 step process to distribute your Library and Flight Documents across the fleet

1. Configure notification emails, assign units or Profiles ,assign pilots/EFB to certain designated aircraft only
2. Update MFB Library or use Dispatch Console to send Weather flight plans etc.
3. Alert crews to EFB update requirement by use of MFB auto notification system (Trigger email reminders on effective date.)
4. Monitor your crews updating their assigned EFB in real-time

Profiles and EFB Assignment on the web

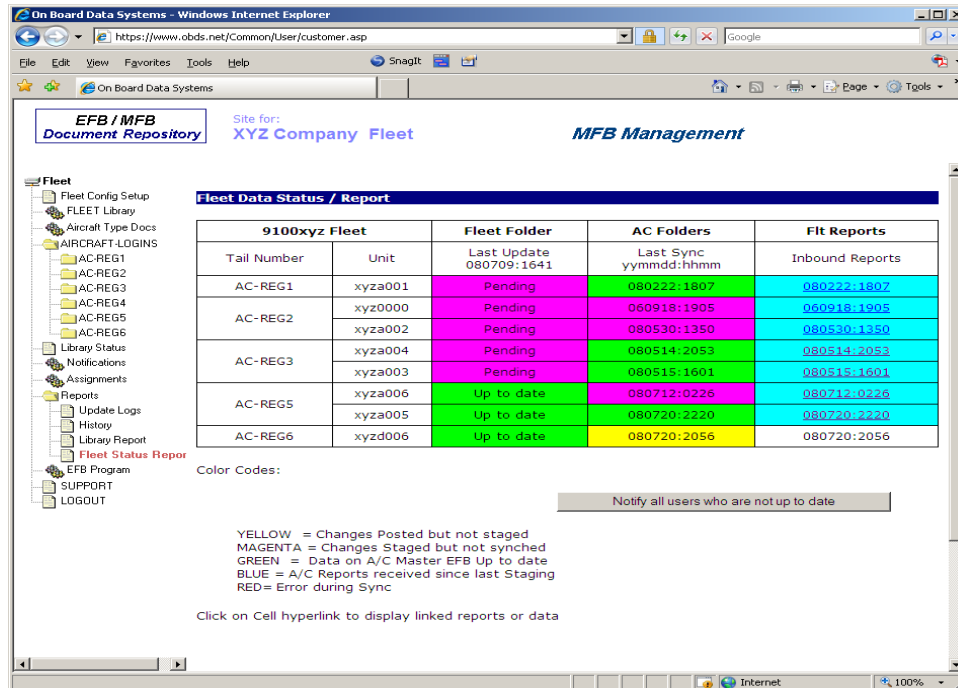

1. Assign pilot emails for auto-notification feature
2. Assign EFB to pilots or to aircraft
3. Assign Profiles for pilots licensed on certain Tail#s or Type
4. Receive Report and forms directly from the crewmembers including Acknowledgements of received document updates or Company Memos

OBDS/MFB forms a Beautiful Management and Compliance Tool

(see the testimonials http://www.obds.com/industry_links.htm)

OBDS.com Website Updates;

You will notice more links and information than before. Go to www.obds.com

We have added links to News and Press Releases, OBDS White-papers and many more.

More User Testimonials;

More and more MFB users are relying on the system to apply operational control procedures across the fleet. Ken Hall with Hutt Aviation /Ahern Rentals in Las Vegas has a particularly extensive MFB library over 1.5GB. Ken and the operation rely on MFB for more than just library sync . They also access a 4-500MB tracking file directly on the server. See en's detailed testimonial on our site: http://www.obds.com/industry_links.htm

IMPORTANT: New OBDS Support - Infrastructure and Focus

your operation is not getting full value from the system CONTACT us ASAP to schedule a conference call to review the program end to end. We will issue a new Fleet agreement and assure your satisfaction. ACS and OBDS work in conjunction to provide fleet support, training and setup services

Online TRAINING and TUTORIALS

In order to assist in introduction and crew training a new set of animations are in production for you. These take you through a complete typical flight and use all features and functions of the EFB. A simplified tutorial shows the basic feature set required to fly.

Animated Tutorials

This tutorial is ideal for developing a new or expanded S.O.P for your company operations.

If you wish to have a Template SOP this is included in the Fleet Support package.

For the manager, again the tutorial will take you through all steps to make a library change, issue notifications, receive updates and at the end of the flight, receive the forms or flight data for archiving.

Streamlined MFB installations;

Now you can install and update the MFB program by use of OBDSsync.

Stay current with MFB updates.

OBDS will issue MFB update details one Airac Cycle ahead of actual change

Subscribed Notifications

The new ability to issue crew notifications by email/SMS allows us to also notify all users of pending updates so that they be accomplished in a timely fashion

- 1 Advise when Jeppesen is Ready for update
- 2 Advise all when Jeppesen update is Effective
- 3 Advise all users who are not up to date.

EXPANDED CESNAV-MFB data Package services for CESSNA Owners;

The standard CESNAV-MFB is available on request for your new Citation aircraft. See the home page for this service at CESNAV.obds.com

Cessna and CESNAV users are finding convenience in integrating the CESNAV product with the EFB shell. In addition, OBDS can now supply extra buttons on request to subscribers, including CPAS, CMC, JSUM, etc. You can also set up auto login buttons to any site.

LIBRARY UPDATE MANAGEMENT

Let OBDS maintain your Aircraft and Regulatory docs up to date on your behalf.

All you have to do is select "ONLINE SYNC" on your EFB

Library Management is the new OBDS service model. We can maintain any document or program under subscription and deliver it to your EFBs and laptops automatically

Managed ECL Checklist Updates for HONEYWELL EPIC

Current OBDS Industry Alliances, OEM Clients and Licensors:

HONEYWELL ROCKWELL-COLLINS FUJITSU NOKIA SPRINT BOMBARDIER CESSNA
DASSAULT CMC- ESTERLINE GOODRICH /BJAC ACS ADR GEN-DYNAMICS

OBDS now supports checklist updates for most EPIC and CDS/R systems
Use our familiar web based editing methods to maintain your checklists

Managed ECL Checklist Updates for ROCKWELL Proline 21;

[OBDS and ROCKWELL COLLINS sign ECL Licensing agreement for Proline 21 systems](#)
- online editor and revision management End user or OEM

In addition to the wide variety of other checklist formats supported by OBDS, we have now added the Proline21 to our list of officially licensed platforms.

Until now Clients had to be experts with this program, but more importantly, the Non-Normal sections can now be maintained under revision by OBDS.

OBDS is the only ECL update system fully compliant with FAA AC120-64

We support the following aircraft for ECL updates view data sheets and pricing here

PL21 AIRCRAFT SUPPORTED: Cessna CJ1, CJ2, CJ3, CL300, CL-601, CL-605, ENCORE+, Falcon 20/50 G-150, Hawker800XP, King Air, Piaggio, Premier1A etc...

New owners can REGISTER to receive quotes or simply pay online.

Advanced MFB applications

OBDSnotes™

Keep notes on any library document - Ideal for Paperless training, acknowledgements and signoffs for W&Bal forms etc.

Now you can enter notes, descriptions or other textual tidbits for any document listed in your managed MFB library!

Pilot Assigned vs. Aircraft Assigned EFB systems (PROFILES)

As hardware costs come down, many operations are finding it practical to assign the EFB to pilots instead of Aircraft. This allows the EFB to contain that pilot's complete professional library.

Added advantages are the ability to assign PROFILES so that each EFB can switch from one aircraft content to another without re-syncing.

This is proving to be a very Popular option

Email/SMS/Blackberry Notifications;

Part of the features of OBDS **Server Management**, now managers can automatically notify their pilots of any change to the EFB content.

More important, the manager can send a notice to any pilots or aircraft that are not up to date with the rest of the fleet.

Tying Crew notifications to the EFB content updates is a fundamental control and management advantage.

Current OBDS Industry Alliances, OEM Clients and Licensors:

HONEYWELL ROCKWELL-COLLINS FUJITSU NOKIA SPRINT BOMBARDIER CESSNA
DASSAULT CMC- ESTERLINE GOODRICH /BJAC ACS ADR GEN-DYNAMICS

Dispatch Console OBDSsyncConsole™ – Deliver Flight Documents (weather notams etc) direct to your EFB users in the field;

This is a standalone program where your dispatcher can simply drop a file in the system, Review it and then Sync it. The applicable aircraft crew will then receive a message by email/sms and can then receive the flight documents by OBDSsync™ through a dedicated FLTDocs channel. Your crews simply annotate the documents by use of OBDSnotes™ and then sync them back to the server for distribution to the correct department
This is a POWERFUL TOOL for operational control!

Channel Sales Opportunities

Bring any sale to OBDS and benefit from our **Independent Pilot Representative** program
Come in at any level - from references only to full client setup and support agent
